

CSSE 376 – Lab 9

1. Multipart question
 - a. Array
 - b. 1
 - c. 1.5
 - d. False
 - e. Nil
2. I like the fact that everything is a class. The inherent simplicity in this take on design allows for a lot of flexibility which most other languages don't offer.
3. No, I don't believe so. It strikes me as much better practice to make build from bottom and make sure that the basic stuff is tested thoroughly before putting high level features into mind.
4. Well, I'd say it hinders. It's good for knowing what direction you'll be taking but it's otherwise obnoxious and annoying since you don't build from bottom up, which feels a lot more natural for testing.
5. Complex English makes the code far more understandable to the typical layman and so makes communication much easier; however, code is not usually meant to look like typical English and so will not always mesh well with the English.
